

editor, and a technique for testing whether or not this generated program accurately reproduces the original algorithm.

On the other hand, Japanese Laid Open
5 Patent Application (JP-A-Heisei, 11-212452
corresponding to Japanese patent application No.
Heisei 10-029132) (hereafter, referred to as a
document 2) according to the prior application of
this inventor proposes a encryption strength
10 evaluation support system containing: a device for
statistically determining a relative relation for
each bit of an input/output data of an encryption
program by using a large number of evaluation data
(a clear-text, a key and the like); and a device
15 for editing the relative relation for each
determined bit into a table form or a graph form
and outputting it, as an example of a conventional
technique for supporting a strength evaluation of
a developed encryption program. The content of a
20 copending US patent application NO. 09/236640,^{now US Pat. No. 6,504,929 B1,}
claiming a priority based on Japanese patent
application No. Heisei 10-029132 corresponding to
the document 2 is incorporated herein by reference.

The usage of the encryption diagram editor
25 described in the document 1 enables the encryption
algorithm to be effectively designed. Also, the
usage of the encryption strength evaluation
